Measuring Economic Welfare

1. Gross Domestic Product per person.

\[ \text{GDP Per Person} = \frac{\text{Gross Domestic Product}}{\text{Population}} \]

However, GDP is frequently not available and does not account for all economic output.
2. Income and Wages
   • Wealth
     A. Accumulation
     B. Distribution
     C. Non-traditional
4. Migration- the choice to geographically relocate.
5. Occupation Mobility- the ability to improve worker’s occupational status.
6. Environmental Disamenities
   A. Pollution
   B. Disease

7. Education and Literacy
   Self-Actualization in Maslow’s Hierarchy of Need.

8. Productivity and Leisure
8. Anthropometrics and the Biological Standard of Living
   A. Stature
   B. Body Mass Index
   C. Longevity

9. Skeletal Remains
   A. Length
   B. Hypoplasias
   C. Anemia
   D. Dental Records
   E. Infections
   F. Degenerative Joint Disease
   G. Trauma
