Economics 250a
Course Outline and Reading List

This is the first course in the graduate labor economics sequence, and will focus on labor supply, labor demand, and simple search models. The emphasis of the course is on linking basic theoretical insights with empirical patterns in the labor market, using a combination of methodologies. Students are expected to have completed first year micro, macro, and econometrics courses. There will be a number of problem sets throughout the term, which all students must hand in (though working in groups is strongly encouraged). Students are expected to have familiarity with programs like Stata and Matlab.

I will be adjusting the content of the course and adding some additional readings. I will also hand out my lecture notes. I recommend reading the starred paper(s) in each section before the lecture, and as many of the other papers as possible.

Lecture 1: Review of basic consumer theory; functional form, aggregation, discrete choice
Mas-Colell, Whintoe and Green, chapters 3 and 4.
Geoffrey Jehle and Philip Reny, Advanced Microeconomic Theory (2nd ed), Addison Wesley, 2001

Lectures 2-4: Static Labor Supply
**You should review the Handbook of Labor Economics chapters by Pencavel (volume 1) and Blundell and MaCurdy (volume 3a). An updated version of the latter is:
Richard Blundell, Thomas MaCurdy and Costas Meghir. "Labor Supply Models: Unobserved Heterogeneity, Nonparticipation, and Dynamics" Handbook of Econometrics volume 6, 2007. This is not easy to read but covers a lot of material.

Other readings we will cover in class:
Jerry Hausman, "Exact Consumer’s Surplus and Deadweight Loss" Am Econ Review 71 (Sept 1981), 662-676
**Lectures 5-6: Dynamic Labor Supply**

**Lecture 7: Structural Modeling of Intertemporal Choice (introduction)**

**Lecture 8-9: Labor Demand**

Lecture 10-11: Search Models (an Introduction)

Other papers we’ll mention:

Kory Kroft, Fabian Lange and Matthew Notowidigdo. (2013) "Duration Dependence and Labor Market Conditions: Evidence from a Field Experiment"

Johannes Schneider, Till von Wachter and Stefan Bender (2013). "The Effects of Extended UI Over the Business Cycle: Evidence from Regression Discontinuities Over 20 Years." QJE

Lecture 12-13 Equilibrium Search Models (an Introduction)

Fabien Postel Vinay and Jean Marc Robin (2002) "Equilibrium Wage Dispersion with Worker and Employer Heterogeneity" Econometica.
