

OUTLINE — September 27, 2017

- Definitions of Wealth & Income
 - Perfect Competition & Implications for Income
 - Distribution of Income
 - Explaining Income Distribution
-
- Plus slides we won't get to re: [Wealth Distribution](#)

*Midterm 1 is tonight
Today's material will be on MT 2*

Definitions of Wealth & Income

Wealth (or, Net Worth)
= Assets – Liabilities

Income

Wealth v. Income Perfect Competition Income Distribution Explanations

Perfect Competition & Income

- In long run competitive equilibrium, profit = 0
 - Accounting profit = opportunity cost of labor & money
- Worker income depends upon “marginal revenue product” (MRP)
 - MRP = increase in total revenue from hiring 1 more worker
 - Depends upon [1] marginal product and [2] price of output
 - Assumes perfect competition [in market for labor](#)
 - Lots of workers, all exactly the same,
 - Lots of employers, none with large share of market
 - No barriers to entry or exit

Wealth v. Income **Perfect Competition** Income Distribution Explanations

Policy Implications

- If assumptions of perfect competition satisfied. . .
 - Resulting distribution of income reflects
 - Worker skills & talents
 - Output price
 - Policy implication: do nothing
- But are the assumptions of perfect competition applicable to markets for labor?
 - Lawyers?
 - CEOs?
 - Professors?

Wealth v. Income **Perfect Competition** Income Distribution Explanations

Distribution of Income

- Divide population into fifths:
- Gini Coefficient: A measure of evenness of distribution
 - Gini = 0 means perfectly equal distribution
 - Gini = 1 means perfectly unequal distribution

Wealth v. Income Perfect Competition **Income Distribution** Explanations

CEO to worker pay

Gini coefficient, U.S., 1937-2004

FIGURE I
Annual Gini Coefficients

Wealth v. Income Perfect Competition **Income Distribution** Explanations

Income inequality in Europe and the United States, 1900–2010

Share of top income decile in total pretax income

Fig. 1. Income inequality in Europe and the United States, 1900 to 2010. The share of total income accruing to top decile income holders was higher in Europe than in the United States from 1900 to 1910; it was substantially higher in the United States than in Europe from 2000 to 2010. The series report decennial averages (1900 = 1900 to 1909, etc.) constructed using income tax returns and national accounts. See (24), chapter 9, Fig. 9.8. Series available online at piketty.pse.ens.fr/capital21c.

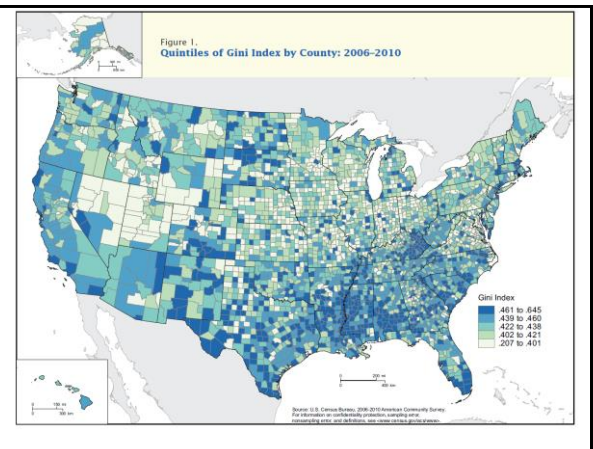

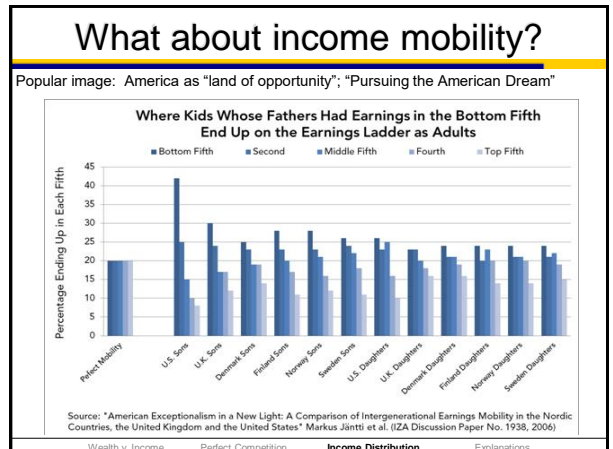

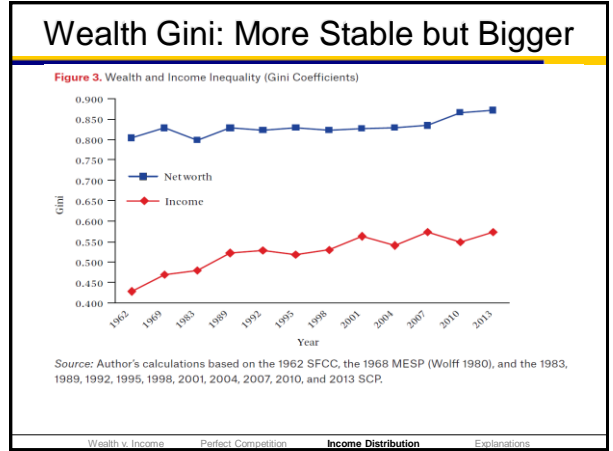

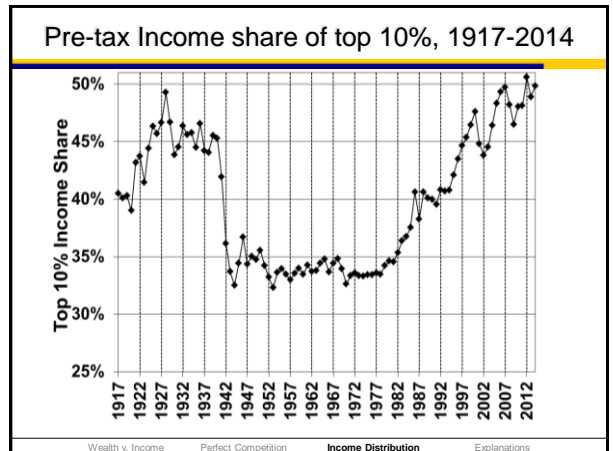

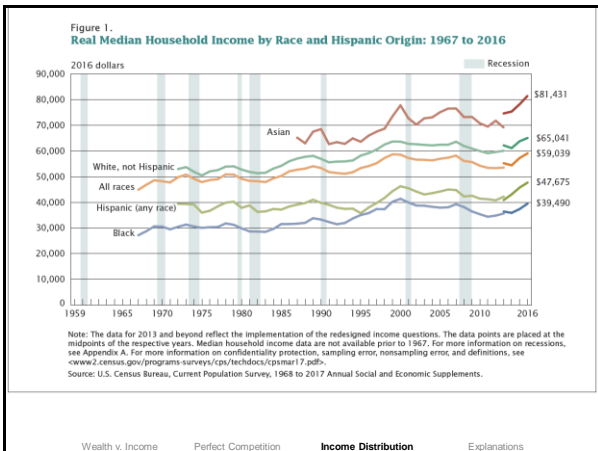

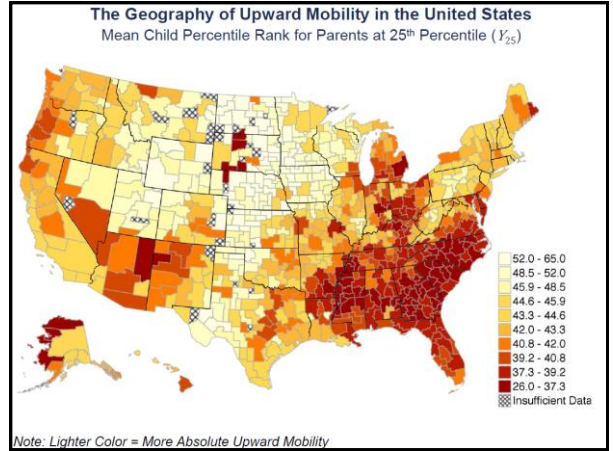

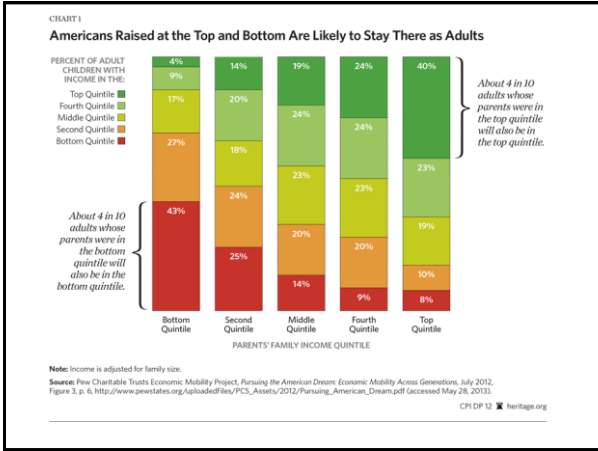

Figure 1.
Quintiles of Gini Index by County: 2006-2010

Breaking out top 10%, 1913-2014

Wealth v. Income Perfect Competition **Income Distribution** Explanations

Who are the top 1%

- Study based on 1979-2005 tax returns
 - Non-financial execs, managers, supervisors
 - Medical professionals
 - Financial professionals
 - Lawyers

Wealth v. Income Perfect Competition **Income Distribution** Explanations

Why the rise in income for top 1%

- Increased labor income
 - "Superstars" reach wider audiences due to technological changes in mass media
 - Recent paper (see tweet from me): IT explains a lot
 - Very large pay increases for CEOs
 - In finance, deregulation and compensation for IPO risk

Wealth v. Income Perfect Competition Income Distribution **Explanations**

Why the rise in income for top 1%

- Increased labor income
- Changes in government taxes and transfers
 - Overall, taxes and transfers lower Gini coefficient
 - But today, less equalizing than 30 years ago
 - Transfers through Medicare (health care, age 65+) benefit all
 - Less generous transfers to low-income households
 - Taxes have become less progressive
 - Shift from income to payroll taxes

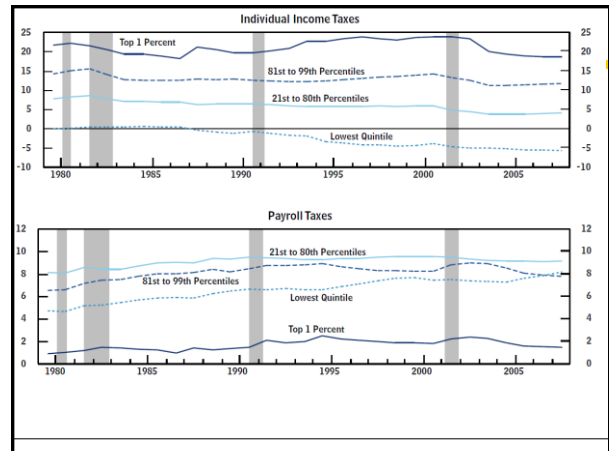

Wealth v. Income Perfect Competition Income Distribution **Explanations**

Average Tax Rates for Top 0.1%

Source: CRS calculations using Internal Revenue Service (IRS) Statistics of Income (SOI) information.
 Note: The vertical axis is the average tax rate.

Wealth v. Income Perfect Competition Income Distribution Explanations

Does cutting top-tier taxes spur growth?

- Apparently not
- Reduction in top tier tax rates
 - Little effect on saving, investment, or productivity growth
 - Does increase income inequality
 - Source: Congressional Research Service, report 9/14/12
- Cutting taxes
 - Lower 90% will increase spending → creates jobs
 - Top 10% *shift* spending, don't *increase* spending → no net job creation
 - Source: Owen Zidar (UC Berkeley Ph.D., Chicago Business School faculty)

Wealth v. Income Perfect Competition Income Distribution Explanations

Does distribution matter?

- Are there effects of an uneven distribution of income?
- Perhaps . . . But it's a new area of research
 - Income mobility easier when more even income distribution
 - Distribution of fiscal stimulus may matter
 - How much of a tax cut do people spend?
 - Political implications (beyond Econ 1 scope)
 - How well democracy functions
 - Ease of implementing change desired by (lower income) majority?
 - Sociological implications (also beyond our scope)
 - How well do groups interact when there are big disparities?

Wealth v. Income Perfect Competition Income Distribution Explanations

Redistribution Debate

- How evaluate arguments?
- Depends on
 - your goals
 - assumptions about source of differences

Wealth v. Income Perfect Competition Income Distribution Explanations

Distribution of Wealth in the U.S.

- Divide population into three groups:

Wealth v. Income Perfect Competition Income Distribution Explanations

Distribution of Wealth in the U.S.

- What share of total wealth was owned by each of the three groups in 2013?
 - Top 1% own **37%** of total wealth
 - Next 19% own **52%** of total wealth
 - Bottom 80% own **11%** of total wealth
- How much wealth did they have?
 - Mean \$ amount
 - Families in top 1% have **\$18.6 million** of total wealth
 - Families in next 4% have **\$3.6 million** of total wealth
 - Families in bottom 40% have negative net worth (**- \$11,000**)

Wealth v. Income Perfect Competition Income Distribution Explanations

Extent of inequality is similar to 1920s

Figure 5: Share of wealth held by the Bottom 99% and Top 1% in the United States, 1922-2010.

Wealth v. Income Perfect Competition Income Distribution Explanations

Explaining Distribution of Wealth

- Area of ongoing research
- Distribution reflects
 - [1] Additions to wealth (saving out of income)
 - The higher a family's income, the more likely they are to save
 - [2] Rate of return on wealth
 - The higher a family's wealth, the higher their average rate of return
