

## OUTLINE — September 17, 2018

- Taxes and Deadweight Loss, continued
- Elasticity
  - Total Revenue Effect
  - Effect on Consumer Surplus
  - Effect on Burden of a Tax
- Accounting versus Economic Profit (maybe)

*Midterm #1: Thurs 9/27, 8 pm. Read the old midterms yet?  
Plazza!! Office Hours!!! SLC & Dept Tutors!!*

*Extra handouts: in racks outside 532 Evans*

## Effect of a Tax Increase

- Sales or excise tax

Taxes & Deadweight Loss    Elasticity    Applications of Elasticity    Profit

## Elasticity

- Elasticity of A with respect to B
  - How much does A change when B changes?

- elasticity =  $\frac{\text{percent change of A}}{\text{percent change of B}}$

Taxes & Deadweight Loss    **Elasticity**    Applications of Elasticity    Profit

## Demand & Supply Elasticities

- How much does  $q_D$  change due to . . .
  - . . . a change in buyer income?
  - . . . a change in price?
  - . . . a change in other prices?
- How much does  $q_S$  change due to . . .
  - . . . a change in price?

Taxes & Deadweight Loss    **Elasticity**    Applications of Elasticity    Profit

## Income Elasticity of Demand

- Remember:
  - Normal Goods
  - Inferior Goods
- Question:
  - By **how much** does  $q_D$  change when Y changes?
- Answer:
  - Income Elasticity of Demand

Taxes & Deadweight Loss    **Elasticity**    Applications of Elasticity    Profit

## Examples: Income Elasticity

$$\% \Delta Y = -1\%$$

$$\% \Delta q_D = -5\%$$

$$\% \Delta Y = +2\%$$

$$\% \Delta q_D = -1\%$$

Taxes & Deadweight Loss    **Elasticity**    Applications of Elasticity    Profit

## Terminology

- *Perfectly Inelastic:*
- *(Relatively) Inelastic:*
- *Unitarily Elastic:*
- *(Relatively) Elastic:*
- *Perfectly Elastic:*

Taxes & Deadweight Loss    **Elasticity**    Applications of Elasticity    Profit

## Price Elasticity of Demand

- Remember:
  - Demand ALWAYS slopes down
- Question:
  - By **how much** does  $q_D$  change when p changes?
- Answer:
  - Price Elasticity of Demand

Taxes & Deadweight Loss    **Elasticity**    Applications of Elasticity    Profit

## Examples: Price Elasticity of Demand

$\% \Delta p = -10 \%$   
 $\% \Delta Q_D = +5 \%$

$\% \Delta p = +2 \%$   
 $\% \Delta Q_D = -4 \%$

Taxes &amp; Deadweight Loss

**Elasticity**

Applications of Elasticity

Profit

## Determinants of Price Elasticity of Demand

- Availability of Substitutes
- Share of Total Spending
- Time Horizon

Taxes &amp; Deadweight Loss

**Elasticity**

Applications of Elasticity

Profit

## Total Revenue (TR) Effect

- What happens to total revenue when price rises?
  - TR (total revenue) = price \* quantity
- *Price-Elastic Demand*
- *Price-Inelastic Demand*
- *Demand with Unitary Price Elasticity*

Taxes &amp; Deadweight Loss

Elasticity

**Applications of Elasticity**

Profit

## Price Elasticity and Slope

Taxes &amp; Deadweight Loss

Elasticity

**Applications of Elasticity**

Profit

## Surplus Depends on Slope

Price-Elastic demand  
relatively little consumer surplus

Price-Inelastic demand  
relatively much consumer surplus

Elasticity

Applications of Elasticity

Profit

## Circle back: Burden of a Tax

- Tax on an item increases its price
  - But (in the short run) not by the full amount of the tax
- Who “bears the (greater) burden” of the tax?
  - Definition: Burden = % of tax paid
- Burden depends upon slopes of S and D
  - That is, upon price-elasticity of supply and price-elasticity of demand

Taxes &amp; Deadweight Loss

Elasticity

Applications of Elasticity

Profit

## Burden & quantity effect Depend on Price-Elasticity

Taxes &amp; Deadweight Loss

Elasticity

Applications of Elasticity

Profit

## And Now for a New Topic

- Draw a big fat line in your notebook

Supply

Taxes &amp; Deadweight Loss

Elasticity

Applications of Elasticity

Profit

## Firms' Supply Decisions

- Question
  - Why does supply slope up?
- Assume
  - Goal of firms is to maximize profit

Taxes & Deadweight Loss    Elasticity    Applications of Elasticity    **Profit**

## Economic Profit

- Profit = **Total Revenue** — **Total Costs**
- Total Revenue (TR)  
= Price \* Quantity
- Total Costs (TC) include both
- 1) Out-of-pocket (explicit, accounting) costs
  - 2) Opportunity (implicit) costs

Taxes & Deadweight Loss    Elasticity    Applications of Elasticity    **Profit**

## Opportunity Cost of Capital

- Capital (machinery) costs you \$10,000
- What if your \$10,000 could earn 5 percent elsewhere
  - "Normal rate of return" = rate financial assets are earning
  - In this case, "normal rate of return" = 5 percent per year
- Here, Implicit cost of capital = 5% of \$10,000

Taxes & Deadweight Loss    Elasticity    Applications of Elasticity    **Profit**

## Opportunity Cost of Labor

- You could earn \$40,000 per year working elsewhere
  - Opportunity cost of your labor = \$40,000 per year

Taxes & Deadweight Loss    Elasticity    Applications of Elasticity    **Profit**

## Accounting vs. Economic Profit

- Total annual revenue = \$100,000
- Annual accounting costs = \$60,000
- Your savings tied up in company = \$50,000
- Normal annual rate of return = 10 %
- Working elsewhere, you could earn \$40,000 per year

Accounting Profit =

Economic Profit =
