PRELIMINARY VERSION, COMMENTS AND CORRECTIONS WELCOME

Chapter	TABLE OF CONTENTS	Page
1	Economic Analysis and Econometrics	1
1.1	Introduction	1
1.2	Petit Verdot's Rational Decision	1
1.3	Stock Market Efficiency	5
1.4	The Capital Asset Pricing Model	9
2	Analysis and Linear Algebra in a Nutshell	18
2.1	Some Elements of Mathematical Analysis	18
2.2	Vectors and Linear Spaces	22
2.3	Linear Transformations and Matrices	25
2.4	Eigenvalues and Eigenvectors	30
2.5	Partitioned Matrices	32
2.6	Quadratic Forms	33
2.7	LDU and Cholesky Factorizations of a Matrix	34
2.8	Singular Value Decomposition of a Matrix	38
2.9	Projections and Idempotent Matrices	39
2.10	Generalized Inverses	41
2.11	Kronecker Products	43
2.12	Shaping Operations	44
2.13	Vector and Matrix Derivatives	45
2.14	Updating and Backdating Matrix Operations	47
3	Probability Theory in a Nutshell	50
3.1	Sample Spaces	50
3.2	Event Fields and Information	50
3.3	Probability	54
3.4	Statistical Independence and Repeated Trials	60
3.5	Random Variables, Distribution Functions, and Expectations	66
3.6	Transformations of Random Variables	81
3.7	Special Distributions	86
4	Limit Theorems in Statistics	93
4.1	Sequences of Random Variables	93
4.2	Laws of large Numbers	105
4.3	Central Limit Theorems	107
4.4	Extensions of Limit Theorems	110
5	Experiments, Sampling, and Statistical Decisions	119
5.1	Experiments	119
5.2	Populations and Samples	121
5.3	Statistical Decisions	126
5.4	Statistical Inference	134
6	Estimation	135
6.1	Desirable Properties of Estimators	135
6.2	General Estimation Criteria	147
6.3	Estimation in Normally Distributed Populations	149
6.4	Large Sample Properties of Maximum Likelihood Estimators	154
