

## OUTLINE — October 3, 2018

- Externalities, continued
  - Coase Theorem
  - The Optimal Subsidy or Tax
- Asymmetric Information
  - Adverse Selection
  - Moral Hazard
- Behavioral Economics

*MT#1 reflection due on bCourses by midnight Thursday  
PS 2 due October 15/16 in section*

## Positive Externality

- Benefits accrue to people who are neither the buyer nor the seller
  - *Education !*
- Private Marginal Benefit
- External Benefit (or, marginal external benefit)
- Social Marginal Benefit (or, marginal social benefit)

Imperfect Competition    **Externalities**    Coase Theorem    Optimal Subsidies & Taxes

## Positive Externality

Imperfect Competition    **Externalities**    Coase Theorem    Optimal Subsidies & Taxes

## Negative Externality

- Marginal Private Cost (or, private marginal cost)
- Marginal Damage Cost (or, external cost)
- Marginal Social Cost (or, social marginal cost)

Imperfect Competition    **Externalities**    Coase Theorem    Optimal Subsidies & Taxes

## Negative Externality

Imperfect Competition   **Externalities**   Coase Theorem   Optimal Subsidies & Taxes

## Coase Theorem

- Solution without government possible
- Requires
  - Well-defined property rights
  - No costs to bargaining
  - Only a few people
- Otherwise: government intervention

Imperfect Competition   Externalities   **Coase Theorem**   Optimal Subsidies & Taxes

## Encourage behavior with subsidy

- Private market produces too little when there are positive externalities
- Encourage with subsidies
- Example: Prof. Olney buys \$48 Bart ticket each month, paid through pre-tax payroll deduction
  - \$3 paid by Bart
  - \$10 paid by UC Berkeley
  - \$10 paid by federal government
  - \$3 paid by state government
  - Which means just \$22 is paid by Prof. Olney

Imperfect Competition   Externalities   Coase Theorem   **Optimal Subsidies & Taxes**

Positive  
Externality:  
A Subsidy

## Externalities & Taxes or Subsidies

- The challenge: what is the **right (or, optimal) size** of tax (negative externality) or subsidy (positive externality)?
  - It's positive (not normative) analysis
  - "Right" or "optimal" means generating socially optimal quantity

Externalities    Adverse Selection    Moral Hazard    Behavioral Economics

Negative  
Externality:  
A Tax

## Externalities & Taxes or Subsidies

- The challenge: what is the **right (or, optimal) size** of tax or subsidy?
  - It's positive (not normative) analysis
  - "Right" or "optimal" means generating socially optimal quantity
- Taxes discourage activity generating negative externalities
  - If Tax > MDC, then
  - If Tax < MDC, then
  - Only if tax = MDC, then
- What should the tax revenue be used for?
  - Offset (or, cover) costs represented by MDC

Externalities    Adverse Selection    Moral Hazard    Behavioral Economics

## When $q=0$ is socially optimal

Externalities    Adverse Selection    Moral Hazard    Behavioral Economics

## Cigarettes & cigarette taxes

Externalities    Adverse Selection    Moral Hazard    Behavioral Economics

## Market Failure: Asymmetric Info

- When one party to a transaction has relevant info but doesn't share it with the other party
- Effect: markets **fail** . . .  
 . . . to produce the quantity where  
 $p = MC = \text{minimum ATC}$
- Two examples of asymmetric info
  - Adverse Selection
  - Moral Hazard

Externalities    Adverse Selection    Moral Hazard    Behavioral Economics

## Adverse Selection

- "Adverse" means harmful or unfavorable
- When the selection of goods offered for sale is not a random selection but is instead an "adverse" (unfavorable) selection
  - Applies also to consumers buying insurance
- Occurs before transaction

Externalities    Adverse Selection    Moral Hazard    Behavioral Economics

## Adverse Selection

Random Selection

Adverse Selection

Externalities    Adverse Selection    Moral Hazard    Behavioral Economics

## Adverse Selection & Labor Markets

- You are an employer
- Workers are heterogeneous
  - A mix of high- and low-quality workers
- You want to hire high-quality workers
- You can't tell from the application who is & isn't a high-quality worker
- *Do you offer an above-market, at-market, or below-market wage?*
  - A. *Above-market wage*
  - B. *At-market wage*
  - C. *Below-market wage*

Externalities    **Adverse Selection**    Moral Hazard    Behavioral Economics

## Adverse Selection

- **Car Insurance**
  - Good drivers or bad drivers?
  - State requires everyone to get car insurance
- **Health Insurance**
  - Healthy people or unhealthy people?
  - Effect on cost of insurance?
  - Affordable Care Act requires everyone to get insurance
- **Consumer credit**
  - Good credit risk or bad credit risk?
  - Effect on availability of credit?

Externalities    **Adverse Selection**    Moral Hazard    Behavioral Economics

## Solutions: Screening

- **Screening**: the employer/insurance company (the party with less information) screens applicants
  - Is there a low-cost way to screen applicants?
  - Sort applicants based on characteristics
  - Note: With perfect screening, there is no asymmetry in information . . .

Externalities    **Adverse Selection**    Moral Hazard    Behavioral Economics

## Solutions: Signaling

- **Signaling**: the employee/insured party (the party with more information) offers a clue
  - Do signals have biased effects on markets?
  - Example: "ban the box"

Externalities    **Adverse Selection**    Moral Hazard    Behavioral Economics

## Solutions: mandatory enrollment

- **Mandatory enrollment** is another solution
  - Require everyone to buy insurance so that pool of applicants/purchasers remains full random sample

Externalities   **Adverse Selection**   Moral Hazard   Behavioral Economics

## Moral Hazard

- When one party to a contract changes behavior after the contract is signed
  - Part of a transaction that takes time to complete
- Occurs after contract is signed

Externalities   Adverse Selection   **Moral Hazard**   Behavioral Economics

## Moral Hazard

- **Insurance**
  - More careful or less careful?
  - Effect on cost of insurance?
- **Bank Bailouts**
  - More careful or less careful with risk?
  - Effect on likelihood of bank failure?
- **Mortgage Rescue Plans**
  - More careful or less careful with \$ commitments?
  - Effect on likelihood of mortgage default?

Externalities   Adverse Selection   **Moral Hazard**   Behavioral Economics

## Solution: Monitoring

- **Monitoring** is a solution to moral hazard
  - Low-cost way to monitor behavior
  - Cancel contracts that are low-quality high-cost
  - Maintain contracts that are high-quality low-cost
  - Note: With perfect monitoring, there is no asymmetry in information

Externalities   Adverse Selection   **Moral Hazard**   Behavioral Economics

## Behavioral Economics

- Another instance of market failure
  - . . . Failure to reach  $p=MC$  at minimum ATC
- Here, challenge assumptions of
  - Utility maximization
  - Profit maximization
- Interested?
  - *Econ 119 (Psych & Econ)*
  - *Econ 138 (Behavioral Econ)*

Behavioral Economics Overview of Macro Measures of Macroeconomy Macro Models

## Example: Risk Aversion

- Two payouts, both with same mean (6.50).

Die roll	Payout A	Payout B
1	0	7
2	4	5
3	8	9
4	15	6
5	3	4
6	9	8

- Which would you prefer? A? B? Click C for "either"

Behavioral Economics Overview of Macro Measures of Macroeconomy Macro Models

## Example: Loss Aversion

- Two payouts, both with same mean (6.17) & SD (10).

Die roll	Payout A	Payout B
1	-5	0
2	10	10
3	15	25
4	-8	0
5	10	1
6	15	1

- Which would you prefer? A? B? Click C for "either"

Behavioral Economics Overview of Macro Measures of Macroeconomy Macro Models

## Example: Loss Aversion

- Do people hate losses more than they like wins?
- If so, implications for risk-taking behavior.
  - You own a stock that you bought for \$50 / share and it is now selling for \$30 / share. Will you sell?
  - You bought a house for \$800,000. If you sold it now, you'll only get \$600,000. You've been offered a new job at a good salary that is 1,000 miles away. Will you sell?
  - You declared a major in X and have taken nearly 80% of the classes you need to complete the major. You hate the major. Will you change majors?
